

Cybersecurity for Business Programs

Once seen as the domain of Information Technology alone, cybersecurity is now being reframed as a significant business enabler and an increasingly critical component of core business and strategy.

Cybersecurity is the backbone of every business and every industry: To protect business, preserve reputation as well as support agility, innovation and growth and being a competitive differentiator.

The increase in IOT, supply chain integrations and digitalisation has accelerated the need for all businesses in every industry to be hyper vigilant in developing strong practices.

The days of “Our IT Support Person/Company takes care of our security” attitude and view of accountability and responsibility are gone.

Businesses, and Business leaders need to consider cyber risks and opportunities and address the governance of cyber security as an essential business function in the same manner as Workplace Health and Safety..

Learning Partnerships Cyber Security Programs provide a range of non-technical cyber education for leaders, managers and end users.

These are management and business courses about cybersecurity targeted at non-technical leaders, managers and consultants although it would also benefit those with a technical background but no cyber security background.

Program	Days	Cost
Employee Cybersecurity Awareness Program	POA	POA
Cyber Security Governance	1	\$350
Secure SME Program <i>(includes individual scoping assessment and debrief)</i>	1	\$650

Secure SME Program

Cybersecurity underpins Australia's economic prosperity and, can enable SME businesses to grow, innovate, and find new ways of creating value for their customers.

For a small or medium business, a cybersecurity incident can be devastating and even fatale. In this course we will provide you with a framework to protect your business using best practice advice and guidance from government and cyber security industry specialists.

In addition to this course the SME will receive a one-on-one hour personal scoping assessment and debrief report.

Course Outline

- Overview of Cybersecurity
- SME cybersecurity issues and Challenges
- Top 10 protection methods
- 3rd Party Providers – Asking the right questions
- Check My Security Position – A self-assessment approach
- Resources and Support
